To Whom It May Concern:

It is with great pleasure that I recommend Evan Hoeger for consideration to your scholarship program. I am a Research Engineer at the Bioeconomy Institute at Iowa State University, and have the pleasure of mentoring Evan since the Fall of 2022.

Evan is a bright and upcoming mechanical engineer. I hired Evan in the Fall of 2022 for an undergraduate research assistant position. From the first day, it was apparent he has a skillset that sets him apart from many undergraduates. That skillset is a combination of curiosity, critical thinking, and hard work. Evan desires to know what our research lab is doing so that he can learn and assist in the progression of our efforts. On numerous instances throughout the past year, Evan would ask intelligent questions regarding what was happening during an experiment and then demonstrate his understanding of the process by noting a change in process conditions or the expectations of different experimental outcomes.

It is evident that Evan has an engineering knack that will undoubtedly lead to a successful career. Furthermore, he has built himself upon the foundation of hard work and problem solving. When I need a task done in the lab correctly, Evan is my top candidate to ask. He gets things done right and with a great attitude. Several times throughout the year, Evan has showed me an improvement upon a process step or a piece of equipment that he has taken upon himself to engineer. This leads to an increase in efficiency and the continual development of a lab that I wish all of my mentees would bring.

As an Iowa State graduate from the mechanical engineering program, I understand the program Evan is currently in and see the promise he has. I strongly believe Evan is both worthy of your scholarship and will be a student you will have been proud to award to. If you have any further questions, please feel free to contact me by email at daugaard@iastate.edu or by cell at 605-929-5580. I would be happy to answer any questions you have and describe more about Evan and his qualifications.

Sincerely,
